Abstract (en)  
[origin: WO2022058196A1] The invention relates to a display device (3) for displaying a graphical representation of information. In order to improve the display of the graphical representation, the display device (3) comprises a first interface (11) for receiving the information via a first transmission path (7) and a second interface (13) for receiving the information via a second transmission path (9). The display device is designed to provide a first part (19) of a complete display (27) of the graphical representation (14) using the information received by the first interface (11) in a first color (17), provide a second part (25) of the complete display (27) of the graphical representation (14) using the information received by the second interface (13) in a second color (23), and display the graphical representation (14) in a complete color (24) to a viewer (31), said complete color being formed by adding the first and second color (17, 23) together.
