Abstract (en)
[origin: WO2022023178A1] The invention relates to a non-inflatable floating aquatic board comprising a shell made of rigid material defining the outer shape of the board and defining a hollow inner chamber, wherein the shell is composed of at least two separable transverse portions, these portions being equivalent to sections obtained by transverse cutting of the board; and wherein at least one of the transverse portions is composed of a first cover and a second cover, being equivalent to sections obtained by longitudinal cutting of said transverse portions carried out through the thickness of the board; the board being able to take an assembled configuration when the transverse portions are assembled and a dismantled configuration when the transverse portions are separated from one another and themselves separated into a plurality of covers, wherein the bulk volume of the board is less than the volume of the hollow inner chamber in the assembled configuration.
