Abstract (en)  
[origin: WO2022022946A1] The invention relates to a closure cap (1) made of plastic and comprising wings (2), in particular radially protruding from the casing outer surface (10) of the cap (1), which are secured to the cap (1) on diametrically opposing sides, wherein each wing transitions from the securing region (3) close to the cap into an actuation region (4) connecting further out and enabling hand actuation, wherein the securing regions (3) of both wings (2) are arranged rotationally symmetrical to the cap rotational axis (6) on both sides of a central plane (5) running through the cap rotational axis (6).
