Abstract (en)
[origin: WO2022023282A1] The invention relates to a dispensing device (1) for a pressurised container, comprising in particular a base (10) and a cover (20). The cover (20) is rotatably mounted on the base (10) between an unlocked position and a locked position. Indicating means indicate the relative position of the cover (20) with respect to the base (10). In accordance with the invention, the indicating means consist of a notch (113) made in the base (10) and an information wall (24) placed in the cover (20), the information wall (24) being located behind the notch in any relative position of the cover. The information wall has an unlocked position mark (241) and a locked position mark (242), the first mark facing the notch when the cover is in the unlocked position and the second mark facing the notch when the cover is in the locked position.
