Abstract (en)

[origin: WO2022026818A1] Systems and methods for operating a system. The methods comprise: generating sensor data by at least one sensor of a waste receptacle that specifies at least one characteristic of at least one item; performing operations by the waste receptacle to identify first media content that is associated with the at least one characteristic of the at least one item; causing the first media content to be output from the waste receptacle or an external device when the first media content is identified by the waste receptacle; and selecting second media content different from the first media content and causing the second media content to be output from the waste receptacle or the external device, when the first media content is unable to be identified by the waste receptacle.
