Abstract (en)

[origin: WO2022023078A1] The invention relates to a device for dispensing a product, in particular a fluid filled in a flexible bag (3) provided with a dispensing member (4), the device comprising at least one box (2) capable of receiving the flexible bag (3), the box (2) comprising a front wall (20) which is movable between a position for opening the box and a position for closing the box and an orientable inner panel (8) which is mounted such that it can be pivoted about a first pivot axis (X1) which is parallel to the front wall (20), between an inactive position and an active position, promoting the flow of the fluid product contained in the flexible bag (3) towards the dispensing device (4), the dispensing device comprising a pressure system (30) biased into an active position of the panel. The front wall (20) is mounted such that it can be pivoted about a second pivot axis (X) which is parallel to the first pivot axis (X1).
