Abstract (en)

[origin: WO2022028962A1] The invention relates to an attachment system (10) for attaching two parts (20, 30) to one another, the system comprising a first part (20) comprising a resiliently deformable hook (21) and a second part (30) comprising a housing (31), the hook (21) being capable of being engaged in the housing (31) so as to co-operate therewith by reversible snap-fitting in order to mechanically bond the first and second parts (20, 30) together, the attachment system (10) being characterised in that it further comprises a locking element (40) which can be moved between a locking position, in which it opposes any deformation of the hook (21) that would allow the hook to leave the housing (31), and a release position, in which it enables a deformation of the hook (21) to allow the hook to leave the housing (31).
