Abstract (en)
[origin: WO2022081098A1] The invention relates to a rotary adjustment knob for a cooking device comprising a central core member (40) and a support body (30) secured from a proximal edge (41) to the front portion (31) of the core member (40) and radially surrounding the core member (40) to form a coaxial tube structure. The rotary knob further comprises an outer ring (20) is at least partially disposed at the outer periphery (32) of the support body (30) from an inner portion (27), an axial groove (25) and a guiding post (33) reciprocally engaged between the inner portion (27) and the outer periphery (32) in a radially interlocking manner.
