Abstract (en)
[origin: WO2022022868A1] The invention relates to a backscattered X-photon imaging device comprising a plurality of X-ray sources (14, 16), all configured to illuminate an analysis area (12) in which an object to be imaged can be placed, and a pixelated X-ray detector (24) configured so as to detect X-photons that can be scattered by the object.
