Abstract (en)
[origin: WO2022023215A1] The invention discloses a method of operating an aerosol-generating device comprising identifying a first trajectory pattern of movement of the aerosol-generating device, wherein the first trajectory pattern enables a connection mode on the aerosol-generating device; advertising connection data to establish a connection with a personal computing device upon enabling the connection mode; identifying a second trajectory pattern of movement of the aerosol-generating device, wherein the second trajectory pattern disables the connection mode on the aerosol-generating device; and sending a disconnection request from the aerosol-generating device to the personal computing device upon disabling the connection mode.
