Abstract (en)

[origin: WO2022029365A1] Systems, methods, apparatuses, and computer program products for performing listen before talk (LBT) for a sub-channel. For example, the LBT procedure for a narrowband device (e.g., a user equipment or a network node) may use a lower LBT energy detection threshold (EDT) by default, but in the presence of narrowband 5 interference, the device may use a higher LBT EDT for a predetermined time period.
