Abstract (en)
A description is given of a process for producing a product in tissue paper from a web (21) formed by two or more layers, comprising the steps consisting of: loading a reel (20) of said multilayer web (21) made up of overlapping layers (21a, 21b, 21c) in a loading and unwinding station (1); unwinding the reel (20) to feed the web (21) to a first embossing station (3) composed of two opposing cylindrical rollers (13, 23) both having micro-points close one to the other in relief, suitable for performing a first embossing of the tip-to-tip type; wherein said web (21) in output from the first embossing station (3) is fed to a second embossing station (4) composed of two opposing cylindrical rollers (14, 24) characterised by undulated reliefs suitable for performing a second undulated embossing on said previously embossed web (21).
