Abstract (en)

A heating system for heating a transport unit (8) of a cable transport system (1) has at least one electrically conductive element (14), which is arranged along a heating section (15) of a predefined path (5) and is configured to selectively electrically connect/disconnect with a heating element (11) arranged in a transport unit (8); a power supply circuit (22), which comprises a switch assembly (37) for selectively activating/deactivating the power supply of the at least one electrically conductive element (14); and a recognition device (16), which is configured to detect the presence of passengers in a boarding area (12) of the transport system (1) and to generate a presence signal indicative of said detected presence; and a control unit (24), which is configured to receive the generated presence signal and to control the switch assembly (37) as a function of said received presence signal.
