Abstract (en)
The object of the invention is a mobile bathing site separating a piece of surface water from the other part of a lake or watercourse, used by a large number of bathers, consisting of segments and curtains. This type of construction is used in places with bathing sites or places occasionally used for bathing, such as in cases of emergency pollution during the bathing season as well as in reservoirs without designated bathing sites. It also allows to use a bathing water purification method. A mobile bathing site having barrier segments with a base and shielding elements, characterized by the fact that a shielded segmental curtain is attached to the brackets with one end, which with the other end is embedded in the bottom zone, the brackets being barriers 10 in an amount depending on the length of the bathing site 1, in pairs connected in the upper zone by a connector 13 attached to the barriers 10, and with the other end embedded in the thrust plates 6, which are plates embedded in the bottom of the reservoir.
