Abstract (en)

An insulated structure (20) for an appliance includes a plurality of walls (24), a cavity (52) defined by the plurality of walls (24), and an aperture (56) defined by one of the plurality of walls (24). The aperture (56) is employed in evacuating the cavity (52) to establish a less-than-atmospheric pressure within the cavity (52). A base structure (60) is coupled to a surface (64) of the one of the plurality of walls (24) that defines the aperture (56). The base structure (60) is aligned with the aperture (56). A pressure sensor (68) is received by the base structure (60). The base structure (60) and the pressure sensor (68) together define a pressure-sensing assembly (72).
