Abstract (en)
[origin: WO2022029171A1] Described is a furniture component (1) having a housing (50) formed thereon and a plurality of exchangeable electronic modules (9) received therein, the electronic modules (9) each having at least one data interface (7) and at least two of the electronic modules (9) each having a separate wireless transceiver unit (7a). The housing (50) provides an energy source (19) for the received electronic modules (9). Several electronic modules (9) can be positioned one behind the other freely or in steps in an extension direction of the housing (50). The electronic modules (9) are suitable and designed for exchanging data with external devices (150) directly or indirectly.
