Abstract (en)

[origin: WO2022058197A1] The invention relates to a display device (3) for displaying a graphical representation of information. In order to improve the display of the graphical representation, the display device (3) comprises a first interface (11) for receiving the information via a first transmission path (7), a second interface (13) for receiving the information via a second transmission path (9), a first sub-display (19) which is designed to display a first sub-region (17, 117, 217) of the graphical representation using the information received by the first interface (11), and a second sub-display (25) which is designed to display a second sub-region (23, 123, 223) of the graphical representation using the information received by the second interface (13). The first and second sub-display (19, 25) form a complete display (27) which is designed to display the graphical representation. The first sub-display (19) and the second sub-display (25) are arranged one behind the other in a viewing direction (29).
