Abstract (en)

[origin: WO2022029669A1] A winding machine (1) for wrapping a cylindrical product (R) with a strip of web material (C) comprises a winding station (4), feeding means (32) for feeding the cylindrical products (R) to the winding station, an unwinding device (3) for unwinding a spool (B) from which a web material is unwound, a cutting system (29) for separating the web material unwound from said spool (B) so as to obtain a strip of web material (C) of suitable length; a conveyor belt (2) suitable for bringing the strip of web material (C) tangent to the cylindrical surface of said cylindrical product (R); a securing device (30, 30') suitable for securing said strip of web material (C) on itself and characterized by the presence of mechanical means for temporary grip (5, 5') suitable for acting on said inlet flap (C1) to favor the wrapping of the strip of web material (C) around the cylindrical product (R) without the use of glue or other permanent adhesion systems.
