Abstract (en)

[origin: WO2022029310A1] The invention relates to a packaging for tobacco products or tobacco substitute products, comprising a container and an odorization device, which is suitable for releasing odorizing molecules to the environment upon opening of the container, wherein the odorization device comprises an inert carrier material and an odorizing composition comprising tobacco particles having an average particle size (sD50 laser diffraction) $\leq 30 \mu\text{m}$ which is adhered to the carrier material. Furthermore, the invention relates to a method for manufacturing such packaging comprising the steps of: providing a container or a pre-product of a container, providing an odorizing composition comprising tobacco particles having an average particle size $\leq 30 \mu\text{m}$, application of the odorizing composition on an inert carrier material which is part of the container or the pre-product of the container or which is separate from the container or the pre-product and brought in contact to the container or the pre-product at a later stage, arranging a tobacco product or a tobacco substitute product in the container, and closing the container.
