Abstract (en)

[origin: WO2022029740A1] An apparatus for managing occurrences of access to an area with controlled access comprises a wearable device which includes detection means for acquiring at least one biological parameter of the user and wireless communication means for transmitting the at least one biological parameter of the user and/or data which represent the state of health of the user established on the basis of the at least one biological parameter of the user. The apparatus further comprises a processing unit which is configured to process the data which represent a state of health of the user in accordance with the at least one biological parameter and a receiving device comprising means for receiving the at least one biological parameter of the user and/or the data. The receiving device is configured to generate an authorization signal or a prevention signal for access by the user inside the access area in accordance with the state of health of the user acquired by the detection means.
