Abstract (en)

[origin: WO2022031211A1] A method of operating a first radio access network, RAN, node in a network including a second RAN node is provided. The method includes transmitting (1003) a measurement transfer request message to the second RAN node. The measurement transfer request message includes an indication to initiate transfer of measurements from the second RAN node to the first RAN node. The method further includes receiving (1005) a measurement transfer response message from the second RAN node. The measurement transfer response message includes an indication of successful initiation of the transfer. The method further includes receiving (1007) a measurement transfer update message from the second RAN node. The measurement transfer update message includes measurement data based on the measurement transfer request message and/or the measurement transfer response message. A method of operating a second radio access network, RAN, node in a network including a first RAN node is also provided.
