Abstract (en)

The present invention proposes a tack button (10, 110, 210) for attaching a substrate (200), the tack button (10, 110, 210) comprising: a pin (30, 130, 230); and a base part (20, 120, 220) for detachably mounting the pin (30, 130, 230), said pin (30, 130, 230) being adapted to project perpendicularly from the base part (20, 120, 220) wherein the base part (20, 120, 220) and the pin (30, 130, 230) are independent of each other. The present invention also proposes a button (100) comprising a button body (40, 140); and a tack button (10, 110, 210) having a pin (30, 130, 230) and a base part (20, 120, 220) for detachably mounting the pin (30, 130, 230), said pin (30, 130, 230) being adapted to project perpendicularly from the base part (20, 120, 220) wherein the base part (20, 120, 220) and the pin (30, 130, 230) are independent of each other; and wherein the tack button (10, 110, 210) is fixed to the button body (40, 140). The present invention also proposes a base part (20, 120, 220) for detachably mounting a pin (30, 130, 230) for forming a tack button (10, 110, 210). The base part (20, 120, 220) comprises a pin receiving portion (23, 123, 223) for receiving the pin (30, 130, 230); and at least one removal hole (21, 121, 221) arranged to receive a part of a removal tool; wherein base part (20, 120, 220) is adapted to receive the perpendicularly oriented pin (30, 130, 230) wherein the base part (20, 120, 220) is formed as a single-piece and is arranged in such a way that the pin (30, 130, 230) can be fitted detachably to the base part (20, 120, 220).
