Abstract (en)

The present invention belongs to the field of forestry devices, more precisely to the field of devices for splitting and chopping wood, and is particularly associated with the splitting means for said devices. The present invention relates to a splitting axe with structures and a vertical log splitter with said axe. The essence of the splitting axe is in that it is provided with grooves, that prevent the log or the wood part from moving or falling off from the axe. The axe according to the invention has a base wedge-shaped body with a wider part that narrows towards a cutting edge defined by two surfaces. Both surfaces are provided with grooves perpendicular to the cutting edge and extend along the height up to the top of the wider part. The grooves may be made in any suitable manner. Preferably, the grooves are made by milling.
