Abstract (en)

[origin: WO2022033925A1] A pull-out guide (1) comprises a guide rail (2), which can be secured on a basic furniture structure, a central rail (3) and a running rail (4), which can be coupled to a pull-out element and can be moved between a pulled-out position and a retracted position, wherein rolling bodies (12) retained in a first rolling-body cage (5) are provided between the guide rail (2) and the central rail (3), and rolling bodies (12) retained in a second rolling-body cage (6) are provided between the central rail (3) and the running rail (4), and the first rolling-body cage (5) is synchronized with the second rolling-body cage (6) via a flexible deflecting element (9), which is guided on the central rail (3), wherein a third rolling-body cage (7) containing rolling bodies (12) is provided between the running rail (4) and the central rail (3), wherein the third rolling-body cage (7) is arranged such that it can be moved relative to the second rolling-body cage (6) parallel to the pulling-out direction. This makes it possible to compensate for slippage on the rolling bodies.
