Abstract (en)

[origin: WO2022034110A1] Massage device comprising: - a first selection interface (11) allowing a user to select an automatic or manual operation mode of the device, the automatic operation mode proposing a cycle for treating the area to be massaged, - a second selection interface (12) allowing a user to select a parameter (G, D) which is linked to the automatic operation mode of the device and representative of a massage parameter, - a massage head comprising at least one massage element intended to come into contact with the area to be massaged, - an actuator for activating the at least one massaging element, characterised in that the device further comprises - a controller automatically selecting a first operation mode (RG) or a second operation mode (RD) for automatically operating the device according to the parameter (G, D) selected by the user, the first mode (RG) and the second mode (RD) each being associated with a specific function of the actuator.
