Abstract (en)

[origin: WO2022036380A1] The invention relates to an atomizer (1) for a coating composition, comprising a coating composition substrate which is vibration-excited by an exciter (3). In order to provide workpieces with a coating of uniform thickness in such a way that resources are saved, the coating composition substrate is a membrane (2) driven by a rotary drive and supplied with acoustic waves by an exciter (3) to vibrate.
