Abstract (en)
[origin: WO2022033628A1] The invention relates to a transport container (1) for a temperature-controlled transport of temperature-sensitive goods, comprising a container wall (2) which completely encloses an interior (3) in a closed state. The container wall (2) comprises three lateral wall elements (21a, 21b, 21c), a cover element (22), a base element (23), and a door element (24) which can be arranged on the transport container (1) so as to completely close an opening (10) of the transport container (1), and each of the three lateral wall elements (21a, 21b, 21c) is equipped with at least one receiving strip (4) so as to attach temperature storage elements (5) thereon. A receiving frame (6) with at least one receiving strip (4) is movably arranged on at least one of the lateral wall elements (21a; 21c) adjoining the opening (10) in order to attach temperature storage elements (5) so as to at least partly cover the opening when the transport container (1) is closed and completely release the opening (10) when the transport container (1) is open.
