Abstract (en)

The present invention relates to a barrier for encapsulating a liquid medium within the perimeter of a vehicle, a system for extinguishing a fire in a burning vehicle or an electric vehicle with an overheated battery and a method for extinguishing a fire in a vehicle. The barrier comprises a main part having a circumferential chamber having a first volume defining an opening for surrounding the vehicle, having a first volume, and the barrier comprises an integrated channel having a second volume being smaller than the first volume, such that when injecting a fluid into the channels, the barrier unrolls or unfolds in the direction of the channels into a second state where the circumferential chamber surrounds the car.
