Abstract (en)

The invention provides a device (100) for longitudinally folding a textile item (900). The device (100) comprises a conveyor system (110) for transporting the textile item (900) through the device (100), first and second folding template parts (120, 125) for setting fold positions (901, 902) along the textile item (900); and moveable first and second folding blades (130, 135) for folding the textile item (900) over the folding template parts (120, 125). The folding blades (130, 135) are moved by means of a drive system which is positioned in the device (100) above the conveyor system (110). The invention also provides an extension module (200) for a device (100) for longitudinally folding a textile item (900), wherein the extension module (200) provides the folding blades (130, 135) and the drive system, and wherein the extension module (200) is arranged for being installed on the device (100) above the conveyor system (110) of the device (100).
