Abstract (en)  
[origin: WO2022069674A1] The present invention provides exfoliating compositions comprising biodegradable gel-microbeads, wherein said gel-microbeads comprise alginate from algae. The present invention further provides biodegradable gel-microbeads comprising multivalent cation crosslinked alginate from algae, preferably wherein the gel-microbead further comprises at least one carbohydrate of algae different from alginate, and methods for preparing such biodegradable gel-microbeads.
