Abstract (en)

[origin: WO2022037989A1] For a fast switch (25) for a sanitary device (26), more particularly a shower device (27), which fast switch is designed to connect a water source (A) and a water outlet apparatus (B), it is proposed that the fast switch (25) for a sanitary device (26), more particularly a shower device (27), comprises: - a tube body (10), which comprises a water inlet end (11) designed for connecting to the water source (A), a water outlet end (12) designed to connect to the water outlet apparatus (B), the water outlet end (12) and the water inlet end (11) being able to approach each other or move away from each other, and a press piece (13), which is disposed on the water outlet end (12) and moves with the water outlet end (12); and - a valve body (20), which is disposed in the tube body (10) and can realize at least two fluidic switching states between the water inlet end (11) and the water outlet end (12), the valve body (20) comprising a switching element (24), and the press piece (13) of the tube body (10) being able to press the switching element (24) of the valve body (20) as a result of the mutual approaching of the water inlet end (11) and the water outlet end (12), whereby the valve body (20) is switched, in order to selectively set one of the at least two fluidic switching states between the water inlet end (11) and the water outlet end (12).
