Abstract (en)

[origin: WO2022037759A1] The invention relates to a field device (3) comprising an electronic unit having a communication interface (5) for communication with a service unit (7), at least one measurement transducer (9), connected to the electronic unit, for acquiring a measurement variable, and at least one triggering element connected to the electronic unit, wherein the electronic unit is designed and configured in such a way that a first service request is initiated in the service unit (7) both when a limit value of the measurement variable is exceeded and when the triggering element is actuated.
