Abstract (en)  
[origin: EP4201536A1] The purifier includes: a sieving part including a sieving screen and configured to sift a processing target while carrying the processing target on the sieving screen in a predetermined direction; a plurality of straightening chambers disposed above the sieving part and in communication with interior of the sieving part, and separated from each other so as to be lined up in the predetermined direction; a plurality of air flow regulating valves respectively provided in the plurality of straightening chambers, and each configured to regulate flow rate of air passing through the sieving screen and flowing upward in the corresponding straightening chamber; a plurality of motors configured to respectively drive the plurality of air flow regulating valves to control opening degrees of the plurality of air flow regulating valves; and a controller configured to control the plurality of motors.
