Abstract (en)
[origin: WO2022046595A1] Hair treatment compositions, kits thereof, and methods of use thereof that provide enhanced color tone preservation. The hair treatment compositions typically include about 2 to about 10 wt.% of two or more cationic surfactants comprising a dialkyl dimonium halide compound or salt thereof and a mono-alkyl trimonium halide compound or salt thereof; about 0.1 to about 10 wt.% of a thickening agent; about 10 wt.% or more of a fatty compound; about 0.1 to about 10 wt.% of a silicone; and water, wherein all weight percentages are based on the total weight of the hair treatment composition. Additionally, the hair treatment compositions are typically formulated to have a weight ratio of the total amount of the di-alkyl dimonium halide compound or salt thereof to the total amount of mono-alkyl trimonium halide compound or salt thereof that is about 1 : 10 to about 5: 1.
