Abstract (en)
[origin: WO2022042976A1] The invention relates to a treatment module (7) for a laundry treatment appliance (1), said treatment module comprising a plurality of treatment brushes (17), each of which is provided for contact with a laundry item (5) to be treated. In order to design a smoothing process to be as optimal as possible, each pair of treatment brushes (17) form at least one pair (33) and are or can be positioned relative to one another in one treatment position each, in which treatment position the treatment brushes (17) of the at least one pair (33) are located opposite one another in such a way that, when a laundry item (5) is positioned between the treatment brushes (17) of the at least one pair (33), they are in contact with both sides of said laundry item (5).
