Abstract (en)

[origin: WO2022046004A1] The invention relates to a system whereby the flushing fluid is transferred into the ceramic sanitary ware bowl (11) in such a way that it will perform a helical rotational movement. More particularly, the invention relates to a system whereby the fluid is conveyed from the fluid source into the ceramic sanitary ware (1) and the fluid is transferred into the ceramic sanitary ware bowl (11) by guiding the same in a way to perform a helical movement by means of a single apparatus.
