Abstract (en)
[origin: WO2022042784A1] The invention relates to a partial-opening device (1) for a motor-vehicle door element (6), comprising: - an electric drive (7); - an actuating element (4), more particularly a pushing element, which acts on the door element (6), wherein the actuating element (4) can be moved by means of the electric drive (7) and by means of a transmission (3) arranged between the electric drive (7) and the actuating element (4), such that the door element (6) can be at least partially opened by means of the actuating element (4), and wherein the transmission (6) has a drive lever (10), which is disposed on an outer end (19) of the actuating element (4), which outer end is associated with the door element (6).
