Abstract (en)

[origin: WO2022042939A1] In a fitting (1) for securing a frame (2) in a wall opening, having a mount for securing to a frame (2) and a first clamping bracket (4a) and a second clamping bracket (4b), which are guided displaceably against one another in order to change the span of the clamping brackets (4a, 4b), the first clamping bracket (4a) being guided displaceably on the mount and the second clamping bracket (4b) being guided displaceably on the first clamping bracket (4a), the mount is formed as a rail (3) with at least one rail portion (9), which is gripped from above and below by guide portions (12, 13) of the first clamping bracket (4a) in order to hold the first clamping bracket (4a) on the rail (3) and guide said bracket displaceably.
