Abstract (en)
[origin: WO2022042789A1] The invention relates to an electric machine arrangement (1), comprising an electric machine (2) having a stator (3) and a rotor (4), wherein, according to the invention, at least one leaf spring element (84) is arranged between a peripheral connection point of the stator (3) and a component (6) supporting the stator (3), which leaf spring element is formed as an electrical conductor in order to provide electrical contact with at least one of the winding connections of the stator (3).
