Abstract (en)

A support structure and a cleaning device. The support structure is specifically a dust bag support frame, comprising a top structure and a side structure. The top structure is formed to be connected and fixed to the body of a cleaning device. The side structure comprises: a dust bag mounting structure, a dust bag being cooperatively mounted, by means of a mounting component thereon, to the dust bag mounting structure; and a support frame air intake passage (14), which is used to place a dirty air inlet of the cleaning device and an inlet of the dust bag in communication. By means of the support structure, a disposable dust bag can be detachably mounted in a dust collecting device, and when the dust bag is full, the dust bag can be conveniently removed from the support structure.
