Abstract (en)
The present invention concerns a writing implement (100) comprising an elongated housing (70), and at least a first core (10), slider (30), and return spring (50). The first core (10) is arranged within the elongated housing (70). The first slider (30) is coupled to the first core (10) for sliding with it between an extended position in which a writing tip (12) of the first core (10) extends through an orifice (73) at a front end of the elongated housing (70) and a retracted position in which the writing tip (12,22) is held within the elongated housing (70). The return spring (50) is laterally offset within the elongated housing (70) with respect to the first core (10). The first return spring (50) is coupled to the first slider (30) and core (10) for returning them from the extended position to the retracted position.
