Abstract (en)

[origin: EP4207744A1] Embodiments of this application provide a video shooting method and an electronic device, and relate to the field of terminal technologies. The method is applied to an electronic device including a display, a first camera, and a second camera, the first camera and the second camera are located on different sides of the display, and the first camera and the display are located on a same side of the electronic device. The method includes: displaying, in a first region of the display, a first image collected in real time by the first camera, and displaying, in a second region of the display, a second image collected in real time by the second camera, where the second region is the entire display region of the display, and the first region is smaller than the second region; responding to a detected user operation, and gradually decreasing an opacity of the first image displayed in the first region from a second opacity to a first opacity; and displaying a third image in a third region of the display, where the third image is the second image collected in real time by the second camera, and the third region of the display is the entire display region of the display.
