Abstract (en)
[origin: EP4207861A1] Embodiments of this application disclose a parameter update method, including: A terminal apparatus receives a parameter that is configured by a network apparatus and that is used to calculate an update period, where the update period is used to indicate time at which the terminal apparatus receives an uplink time-frequency synchronization parameter; and the terminal apparatus receives an updated uplink time-frequency synchronization parameter based on the update period. The network apparatus configures the parameter for calculating the update period, so that the terminal apparatus can update the uplink time-frequency synchronization parameter in time. This reduces an error of uplink time-frequency synchronization, and ensures communication quality.
