Abstract (en)
[origin: WO2022051707A1] A material treatment device, which is intended to treat elongated elements such as hair includes a plurality of rods arranged circumferentially as part of a rod barrel and a handle attached to the rod barrel for rotatable support thereof. A mechanism is provided for rotating the rod barrel in a first direction and for rotating or allowing rotation of each of the rods separately from the rod barrel in a second direction opposite the first direction. With this rotation, material being contacted by the rods during use of the hair treatment device rolls away from the contacted rod in the second direction.
