Abstract (en)
[origin: WO2023052649A1] The invention relates to a transport facility (100), having a first traction cable (11) that describes a first closed loop (10) and is configured to be driven by at least a first drive means (12) at a nominal linear velocity, and a vehicle (30) having a coupling device (31) for coupling the vehicle to the first traction cable, the transport facility comprising at least a first traffic lane (101) having at least a first segment (110) comprising at least one track (111) along the first traction cable, the first traffic lane comprising at least a second segment (120), the transport facility being configured so that the vehicle is coupled to the first traction cable and pulled by same at the nominal velocity so as to pass through the first segment and the second segment, the first traction cable fully supporting the vehicle and driving it at the nominal speed along the second segment.
