Abstract (en)

[origin: CA3193625A1] The invention relates to a frame formwork element (100) for a frame formwork system (300) for producing a wall portion of concrete construction, comprising: a plurality of, in particular four, edge profiles (101) which form a frame (102) with a frame inner side (103) and a frame outer side (104), wherein at least one edge profile (101) is a hollow profile and has, in cross section, a profile portion on the frame inner side with a groove-forming fastening bead (107) and a profile portion on the frame outer side with a groove-forming stiffening bead (105), wherein, in cross section of the edge profile (101), the fastening bead (107) and the stiffening bead (105) are situated opposite one another and have the same shape. The invention also relates to a frame formwork system (300) having such a frame formwork element (100) and a strip (200). Also proposed is the use of a strip (200) in a frame formwork system (300).
