Abstract (en)

[origin: WO2022053408A1] The present invention relates to a device (1000) for trapping pests in a grain storage environment comprising an elongate hollow body (1100) having a middle portion (1110) comprising a plurality of openings (1112) and a lower portion (1120), the middle portion (1110) and the lower portion (1120) being connected by a non-return opening system (1200), the device comprising an embedded electronic module comprising at least one sensor (1310) configured to generate at least one item of risk data containing at least one piece of information representative of a risk of infestation in the trapping zone (1121) and wireless transmission means (1320) configured to transmit the at least one item of risk data to a remote electronic entity (2000).
