Abstract (en)
[origin: WO2022054031A2] The present invention relates to contact lens packages which allow the lens to be removed from the lens package with a single touch. The lenses packages comprise a lens support which holds the lens in a convex position. When the package is drained there is less contact area between the support and wetted contact lens than between the user's finger and the contact lens, providing the desired one touch transfer.
