Abstract (en)
[origin: WO2022054033A2] The present invention relates to contact lens cases which allow the lens to be removed from the lens case with a single touch. The lenses cases comprise a lens support which holds the lens in a convex position. When package is drained there is less contact area between the support and wetted contact lens, than between the user's finger and the contact lens, providing the desired one touch transfer.
