Abstract (en)

[origin: WO2022048707A1] The invention relates to a system for automating a machine tool, comprising an external device (108) for feeding workpieces and/or tools to and/or discharging workpieces and/or tools from the machine tool (102), at least one actuator (110) for actuating a component of the machine tool (102) and/or at least one sensor (112) for detecting at least one signal of a display component (102a) or a state of the machine tool (102) or of the external device (108), and a control unit (106) which is configured to trigger at least one function of the machine tool (102) or the external device by actuating the at least one actuator (110) and/or to trigger at least one function of the external device (108) on the basis of a signal of the at least one sensor (112).
